LEADING RENEWABLE ENERGY FIRM REACHES 2 MEGAWATT MILESTONE

Bristol, RI- Earth Friendly Energy Group, the Northeast's premiere renewable energy design and installation firm, recently reached an energy milestone: the company has installed over 2 megawatts of residential solar in homes across the Northeast. SolarWrights sells, designs, and installs residential and commercial solar energy systems. Earth Friendly Energy Group, Inc, is the parent company of SolarWrights, EnergyWrights, and WindWrights.

"It took us five years to install our first megawatt of residential solar," remarks Bob Chew, President and CEO of Earth Friendly Energy Group, "But, incredibly, it took us only a matter of months to sell a second megawatt." According to a recent poll by national polling firm Greenberg Quinlan Rosner Research, demand has increased significantly for renewable sources of energy in New England and across the country in the past year, with 83% of Americans supporting a plan to end the country's "addiction" to oil. Earth Friendly Energy Group has capitalized on this demand and expanded rapidly, acquiring Connecticut-based SunSearch and Massachusetts-based Kosmo Solar in the past year. Rising demand coupled with greater capacity enabled the company to rapidly install a full megawatt of residential solar in less than eight months.

"This second megawatt represents not only economic gain, but environmental gain," continues Chew, "And it doesn't even include the total wattage of our commercial solar jobs. This residential solar milestone a tremendous achievement for us, for the Northeast, for our customers, and for the planet. We will continue to grow; we're aiming to hit ever more megawatts in the next year."
