LEADING RENEWABLE ENERGY FIRM INSTALLS FIRST SOLAR PV SYSTEM IN JOHNSTON

JOHNSTON, RI - SolarWrights, the Northeast's premiere renewable energy design and installation firm, has installed the first solar electric system in Johnston, RI. The 2.88 kW photovoltaic array will supply a significant portion of the electricity for the Calcagno residence annually.

SolarWrights designs and installs residential and commercial solar energy systems. Founder of SolarWrights, Robert Chew, who has been designing and installing renewable energy systems for more than twenty-five years, said, "We are pleased that Johnston can now boast a solar electric system on one of its rooftops. We congratulate the Calcagno family on their decision to power their home with renewable energy."

Johnston building inspector Gilbert Parrillo commented, "This is the energy source of the future. We're glad that citizens of Johnston are thinking along green lines. We at the Johnston Building Department will do what we can to support residents who want to go forward with such projects."
